#### A MANUAL FOR

# Artificial Intelligence and Machine Learning Laboratory (18CSL76)

#### **VII SEMESTER**

#### **PREPARED BY**

#### Mr. SHASHIDHAR V

Asst. Professor
Dept. of Computer Science & Engineering
R.R.C.E, Bangalore

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING 2 02 2- 2 3

## 18CSL76-Artificial Intelligence and Machine Learning Laboratory

- 1. Implement A\* Search algorithm.
- 2. Implement AO\* Search algorithm.
- 3. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
- 4. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge toclassify a new sample.
- 5. Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.
- 6. Write a program to implement the naive Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
- 7. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
- 8. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
- 9. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs

```
Program-1: Implement A* Search algorithm.
from heuristicsearch.a star search import AStar
aj list=\{'A': [('B', 6), ('F', 3)],
          'B': [('C', 3), ('D', 2)],
          'C': [('D', 1), ('E', 5)],
          'D': [('C', 1),('E', 8)],
          'E': [('I', 5), ('J', 5)],
          'F': [('G', 1),('H', 7)],
          'G': [('I', 3)],
          'H': [('I', 2)],
          'I': [('E', 5), ('J', 3)],}
heuristics={'A': 10,'B': 8,'C': 5,'D': 7,'E': 3,'F': 6,'G':
5,'H': 3,'I': 1,'J': 0}
graph=AStar(aj list,heuristics)
graph.apply a star(start='A', stop='J')
Output:
Path
A \rightarrow F \rightarrow G \rightarrow I \rightarrow J
Cost
0 \rightarrow 3 \rightarrow 4 \rightarrow 7 \rightarrow 10
```

```
Program-2: Implement AO* Search algorithm.
from heuristicsearch.ao star import AOStar
print("Graphs-1")
heuristic={'A':1,'B':6,'C':2,'D':12,'E':2,'F':1,'G':5,'H':7,'J':
1,'T':3}
